A while ago, I used Quicken to manage my finances. It's proprietary software, and year after year, it cost me more and more money for upgrades. Eventually, I realized it isn't prudent to take away from my budget to help me control my budget.

Fortunately, I learned about HomeBank while reading an article about open source money management tools. HomeBank is free personal banking software. It runs on Linux, Windows, and macOS, and it's offered in 56 different languages. These advantages ensure it's available to you no matter your choice of operating system and the language you speak.
