4MLinux 32.0 STABLE released.

By Roy Schestowitz
Created 09/03/2020 - 7:30pm

The status of the 4MLinux 32.0 series has been changed to STABLE. Edit your documents with LibreOffice 6.4.2.1 and GNOME Office (AbiWord 3.0.4, GIMP 2.10.18, Gnumeric 1.12.46), share your files using DropBox 91.4.548, surf the Internet with Firefox 73.0.1 and Chromium 79.0.3945.130, send emails via Thunderbird 68.5.0, enjoy your music collection with Audacious 3.10.1, watch your favorite videos with VLC 3.0.8 and mpv 0.30.0, play games powered by Mesa 19.3.0 and Wine 5.2. You can also setup the 4MLinux LAMP Server (Linux 5.4.17, Apache 2.4.41, MariaDB 10.4.12, PHP 5.6.40 and PHP 7.3.14). Perl 5.30.1, Python 2.7.17, and Python 3.7.5 are also available.

As always, the new major release has some new features. Better support for Intel video cards (via Mesa 3D drivers with VDPAU emulation). PCManFM in 4MLinux can now create video thumbnails (using FFmpeg) as well as PS/PDF thumbnails (using ImageMagick). AV1 video decoding is finally available out of the box (via FFmpeg with the dav1d library).

Good news for nerds! The following applications have been added for them: SciTE (source code editor), GNU nano (with spell checker), mg (originally called MicroGnuEmacs). Additionally, Vim (with gVim) is now available as a downloadable extension.
GNU Linux

Also: 4MLinux 32.0 Arrives with Linux 5.4 LTS and LibreOffice 6.4 [4]
