China is planning to replace the US-based Windows operating system completely this year by a Linux based operating system called UOS.

UOS a.k.a Unified Operating System is a Linux based homegrown OS (desktop and server) right in China. It is said to
be developed to run all hardware, chips made in China for their own purpose. Based on the popular Linux distribution Deepin, it is reported that UOS has made significant progress recently to boot up in 30 seconds in common hardware.
