In September we released the WebXR Emulator Extension which enables testing WebXR VR applications in your desktop browser. Today we are happy to announce a new feature: AR support.

Please note some of the information provided in this report may be subject to change as we are sometimes sharing information about projects that are still in early stages and are not final yet.

During the COVID-19 pandemic, many of us are turning to the internet to connect, learn, work and entertain ourselves from home. We’re setting up new accounts, reading more news, watching more videos and scrolling through social media at an all-time high. These are excellent ways to stay connected while being physically distant, but they do come with a set of concerns worth noting.
