Lists in python ? Python list methods [2]

In this chapter, we will create simple python programs that will demonstrate the usage of various python list methods.

The one where we build a web scrapper and a slackbot - Part 1 [3]

The one where we build a web scrapper and a slackbot - Part 2 [4]

Exporting pandas DataFrames into SQLite with SQLAlchemy [5]

It is common when performing exploratory data analysis, for example when examining COVID-19 data with pandas, to load from files like a CSV, XML, or JSON into a pandas DataFrame. You may then do some work with the data in the DataFrame and want to store it in a more durable location like a relational database.

This week we welcome Abigail Mesrenyame Dogbe (@MesrenyameDogbe) as our PyDev of the Week! Abigail is active with the PyLadies organization in Africa and has also helped
organize PyCon Africa. Abigail is also a fellow of the Python Software Foundation.

[...]

I worked with the Internal Audit Department at the Ghana Community Network Services Limited (GCNet) after obtaining a BSc in Computer Science and Engineering from the University of Mines and Technology in Tarkwa, Ghana. Growing up, I struggled with Mathematics and did lots of drawings, paintings, and singing during my hobbies. My hobbies became numerous as I matured so much that I no longer make drawings and paintings but I’ve found happiness in playing with African beads to make accessories and I still sing a lot, although mostly to smaller groups or to myself.

I have a great interest in sports such as volleyball, football and swimming as well. During my final year at the university, I was elected as the captain of the women's volleyball team. We had lots of training sessions and won a few matches. I am actually impressed with how far the team has come after I completed school.

Also, I have a keen interest in Tech Community Building and I find joy in helping others grow in their career.
