After the internet revolution, it's important to be connected with the cyber world to get things done. Skipping the complicated intricacies of how the internet works, on a personal level, we connect to the internet through various ways,
like WLAN (Wireless Local Area Network) or Wi-Fi to put it simply, or some kind of a wired connection to a router, or in some cases, cellular networks.

Whatever the medium be, we almost always require a way to monitor and manage the network connection(s). We are going to suggest a program for the purpose named Nutty.
