We are excited to announce that starting today, you can use Bridge to connect your ProtonMail account with your desktop email app on the Linux operating system.

ProtonMail Bridge is a desktop app available to all paying subscribers that integrates ProtonMail’s strong privacy and security features, such as zero-access encryption and end-to-end encryption, with your email client.

Bridge implements IMAP/SMTP protocols and is compatible with any email client which follows this standard. The
Linux version we are launching today includes special optimizations for Thunderbird. Since releasing Bridge for Linux in beta, we have collected valuable feedback from our community and improved the speed and performance. Linux users now have access to all the convenience provided by an email client, including full-text search, offline editing, and the ability to export and back up emails from your ProtonMail account.
