KaOS is very proud to announce the availability of the May release of a new stable ISO.

This release is unlike the February version, not about many new features, but rather about updates and rebuilds. Most of the base of this distribution has been rebuild on a new GCC 9.3.0, Glibc 2.31 & Binutils 2.34 based Toolchain. Other rebuilds were needed for ICU 66.1, Boost 1.72.0, Krb5 1.18, Glib2 2.64.2 based stack, Guile 2.2.6, Mesa 20.0.6, NetworkManager 1.22.10, Perl 5.30.2, Linux 5.6.8 and Qt 5.14.2.

[...]

KaOS? creation Croeso (Welsh for welcome) for helping with configuring a new install is included. It will run on the newly installed system and offers to adjust some 15 commonly used settings, includes a custom Wallpaper selector, distribution info and the option to select packages to install from six different groups. It is written in QML and fits well with the Welcome application used in the Live system. The latter includes an Installation Guide.
