The FieldComm Group has announced a HART-IP Developer Kit built around the Raspberry Pi for evaluation, demonstrating, and prototyping devices that use HART-IP, the company's IP-enabled version of its HART Communication Protocol field communications solution. Some 375 FieldComm Group members representing major suppliers to the process industry are responsible for an installed base of over 40 million HART-enabled field instruments. HART is by far the most dominant communications protocol used in process manufacturing facilities around the world, says the company.
