- [Cinnamon 4.6 Early Preview](#) [2]

Few days ago i saw that Cinnamon 4.6.0 has been released on GitHub and as usual, developers will still release a couple more releases before they mark it stable, but i have made some changes to the SlackBuild scripts and push it to master branch for those who are eager to try the new Cinnamon 4.6.x series.

I believe this version will be used in the next Linux Mint 20 which will be released in June, but i want Slackware-Current users to try this version first
