The latest feature release Git v2.28.0 is now available at the usual places. It is comprised of 317 non-merge commits since v2.27.0, contributed by 58 people, 13 of which are new faces. It is smaller than the releases in our recent past, mostly due to the development cycle was near the shorter end of the spectrum (our cycles last 8-12 weeks and this was a rare 8-week cycle).
