Submitted by Roy Schestowitz on Thursday 30th of July 2020 03:43:15 PM Filed under [Security](#) [1] [BSD](#) [2]

For five and a half years, OPNsense is driving innovation through modularising and hardening the open source firewall, with simple and reliable firmware upgrades, multi-language support, HardenedBSD security, fast adoption of upstream software updates as well as clear and stable 2-Clause BSD licensing.

20.7, nicknamed "Legendary Lion", is a major operating system jump forward on a sustainable firewall experience. This release adds DHCPv6 multi-WAN, custom error pages for the web proxy, Suricata 5, HardenedBSD 12.1, netstat tree view, basic firewall API support (via plugin) and extended live log filtering amongst others.

Download links, an installation guide[1] and the checksums for the images can be found below as well.
