Open source powers many corporate servers, and admins need to know their way around Linux services to keep vital operations running smoothly. That means mastering the command line. The following three downloads from TechRepublic Premium will help you do just that.

TechRepublic contributor Jack Wallen wrote these command-line primers. Wallen, who has been using Linux and writing about it for more than 20 years, knows the ins and outs of most Linux distributions, as well as how to keep systems running smoothly. Follow his advice on how to master the Linux command line, and your servers and users will be in good shape.
