Coming just one week after the first point release, KDE Plasma 5.20.2 is here to further improve the overall stability and reliability of the latest KDE Plasma 5.20 desktop environment series by addressing about 30 bugs in various core components and apps.

Among the highlights, KDE Plasma 5.20.2 improves the consistency of the lid behavior on some laptops, fixes a bug affecting some user profile fields not being saved unless they all have unique new values, makes Tilde expansion work again in KRunner, and improved screen casting and screen capturing support.
