Stabilization of the NixOS happens a month before planned release. The goal is to have as little as possible continuous integration (Hydra) jobs failing before the release is cut. While we would like to release on time, a high quality release is more important.

Individuals who contributed to stabilizing this release: volth, Robert Scott, Tim Steinbach, WORLOfPEACE, Maximilian Bosch, Thomas Tuegel, Doron Behar, Vladimír ?unát, Jonathan Ringer, Maciej Krüger, and 190 others!
