Edgedevices.io's second-gen Pi-oT 2 Raspberry Pi automation add-on offers 8x ADCs, 6x digital outputs, and Ethernet plus options including a 2-hour UPS, RS485, 4x 24V digital inputs, and a 12-24VDC input.

Last year, Cleveland-based Pi-oT, now called Edgedevices.io, launched a Kickstarter campaign for a Pi-oT industrial controller add-on for the Raspberry Pi that is housed within a DIN-rail mountable chassis. Edgedevices.io has now returned to Kickstarter with a Pi-oT 2 model loaded with plenty of new features including DIDO and an Uninterruptible Power Supply (UPS) while losing the 5x relays of the original.
