The "Pangolin" would be System76's second AMD-powered Linux laptop after the Serval WS, but this one also features integrated AMD Radeon graphics as the Serval WS came with Nvidia graphics.

At the moment of writing, System76 didn’t say much about their upcoming AMD-only Linux laptop except for the specs, which include either AMD Ryzen 5 4500U or AMD Ryzen 7 4700U CPUs, AMD Radeon integrated graphics, up to 64 GB DDR4 3200 MHz RAM, up to 8TB SSD storage, and a Full HD 15.6-inch matte finish display.
