Heads up: Microsoft repo secretly installed on all Raspberry Pi?s Linux OS

By Roy Schestowitz

Created 04/02/2021 - 4:45pm

Truth to be told, RPis is not 100% opensource. Like Intel and AMD CPU/GPU, it comes with a binary closed source firmware too. However, that doesn?t mean, install unwanted software repo and gpg keys secretly on your device without your knowledge. That is what malware does, and hence Linux and the opensource community are upset. I hope they will fix it. Check out Reddit thread with many more suggestions. RPis/OS maintainer should have published a blog post about such a notable change, and doing so without informing RPis users is not great. What do you think? Let us know in the comment section below.
