Lampone Pi is a live Debian GNU/Linux Buster arm64 operating system for the Raspberry Pi microcomputer boards. It's the only live ISO 9660 operating system for the Pi which can also perform kernel updates. Although it is not affiliated or derived from Raspbian, it's the homologous of Raspbian Lite (they both derive from Debian), but differently it's a 64bit live OS. Lampone Pi is at the moment compatible with the Raspberry Pi 3 family.

:: resilient

A Debian GNU/Linux (Buster) derivative with a unique partitioning scheme crafted for maximizing the strength against filesystem corruption: the ISO9660 system partition is read-only by design at filesystem-level.

:: ductile

Persistence partition contains only the diffs from the stock installation; system updates and your data lay there?you can do system backups/snapshots by just copying the files contained within the 4th partition (rw folder).
GNU Linux Debian
