It's been about five months since the release of Porteus Kiosk 5.1, and Porteus Kiosk 5.2 is here as the second major update to the Porteus Kiosk 5.0 series announced last year in March bringing an updated kernel from the long-term supported Linux 5.10 LTS branch.

Linux 5.10.25 LTS is present in the Porteus Kiosk 5.2 installation images, which adds a new layer of hardware support to the kiosk-oriented distro. Basically, this means that you should now be able to install Porteus Kiosk on hardware where it wasn’t possible using previous releases.
