Gamers using openSUSE Tumbleweed have at least two package updates in the rolling release that enhanced performance on their system and offer new features.

Both the 3D Graphics Library Mesa and computer opponent package Pentobi each landed in a separate snapshot. There have been four Tumbleweed snapshots released so far this week.

Snapshot 20210420 brought in nearly a dozen package updates, which included an update of GNU Compiler Collection 10.3.0. The updated GCC disabled the Parallel Thread Execution, nvptx, offloading for AArch64 and ffmpeg-4 4.4 improved AV1 support and it monochrome encoding. A couple YaST packages were updated. More specifically, the update of yast2-installation to 4.4.4 removed some system directory conflicts and made some changes to the spec-cleaner. Other packages to update in the snapshot were CPU balancer irqbalance 1.8.0, kdenetwork-filesharing 20.12.3 and rpm 4.16.1.3.
