Linux distributions come in various flavors. No matter if users are joining in from Windows, Mac, or any desktop operating system, Linux desktop environments make the onboarding process a lot easier. In this article, I will list the top 8 desktop environments for Linux that you can use in 2021.

We often see new users asking the purpose of having too many desktop environments for Linux. The answer is simple? more options for users and every desktop environment has its own advantages. Or, if you are tired of using one, install any other that feels good to you.

The desktop environment is an important part of any Linux distro. It dictates how applications will look & behave on your desktop. Desktop environments have their own set of applications pre-installed on the operating system. So there is always something new and exciting.
