Submitted by Marius Nestor on Tuesday 27th of April 2021 12:32:19 PM Filed under [Linux](#) [1]

The first biggest change in the Fedora Linux 34 release is, of course, the inclusion of the latest and greatest GNOME 40 desktop environment in the Fedora Workstation edition. This change alone brings many changes to the way Fedora Workstation looks and feel due to the Activities Overview redesign of the GNOME 40 release.

Fedora Linux will now start in the Overview mode after login. Due to this change, the GNOME Welcome Tour app has been adapted to the new design for an integrated and cohesive look, according to the Fedora Project, but this change will probably only affect newcomers, not those who will upgrade from Fedora Linux 33.
