- [A brief overview of the Container Network Interface \(CNI\) in Kubernetes | Enable Sysadmin](#) [2]

If you have worked with Kubernetes (K8s) and tried to learn some of its inner workings, either on the job or in a training course, you must have learned a bit about Container Network Interface (CNI). This article de-mystifies what CNI means and does.

- [Announcing Dates & CFP for Nest with Fedora](#) [3]

As we celebrate Fedora Linux 34 with the upcoming Release Party, we are also looking forward to our next event: Nest with Fedora. As I mentioned in my last update, the 2021 edition of our annual contributor conference will again be virtual. I am happy to announce the dates for this year's contributor conference: August 5th-8th, 2021. The Fedora Project has been thriving, and I am sure that this year's event will be full of exciting content.

- [Fedora 34 Reviewed: A Great GNOME distro that's worth checking out!](#) [4]

I had a chance to check out Fedora 34 recently, and was impressed by the overall quality of the GNOME desktop and its implementation. There are a few rough edges, but overall, it's a great distribution. In this video, I talk about the highlights and what makes it stand out.

- [Fedora Linux 34 available for download](#) [5]

Woo-hoo! Today is officially the day many of us have been waiting for. Yes, Fedora Linux 34 is finally available for download. For many Linux users, Fedora is considered the best overall operating system to be based on that open source kernel. The distro focuses on truly free and open source software -- a pure Linux experience. It is also fairly bleeding edge, but at the same time, it remains stable for everyday use.

What makes Fedora 34 so exciting? Well, this version of the Linux-based operating system uses GNOME 40 as its default desktop environment, and version 40 is the most electrifying version of GNOME in years. GNOME 40 is notable for a horizontal workspace switcher and having the Dash (favorites launcher) moved to the bottom of the screen. Despite being released last week, Ubuntu 21.04 fails to come with this version of GNOME.

[The most popular Fedora Linux in years rolls out | ZDNet](#) [6]

Red Hat's community Linux distribution Fedora has always been popular with open-source and Linux developers, but this latest release, Fedora 34 seems to be something special. As Matthew Miller, Fedora Project Leader, tweeted, "The beta for F34 was one of the most popular ever, with twice as many systems showing up in my stats as typical."

[Recapping day two of Red Hat Summit Virtual Experience 2021](#) [7]

It seems like just yesterday we were planning for Red Hat Summit 2021, and now the two days of our April Summit programming have just flown by. Let's take a quick look back at what happened. And, if you missed something, don't worry! Much of the Summit programming is still available on demand for you to watch at your convenience.

[Red Hat boss on Linus Torvalds: 'He's changed the world' | ZDNet](#) [8]

Red Hat CEO Paul Cormier has continued his regional virtual tour this week, sharing with media in the Asia Pacific region on Thursday his thoughts on what the work Linus Torvalds has done over the last 30 years means for the world.

"Oh, my gosh, where do you start?," he began.

"I mean, he's changed the world. Just his vision of an open operating system."

It's not just the operating system that came out of it, Cormier said.

"That was the very beginning. Even when we got started with Linux 20-plus years ago, it really wasn't -- it was for hobbyists, but what Linus did was really show the world that open

was a better way to develop new innovation," the CEO said. "And I think where Red Hat took it from there, from an enterprise perspective, we showed the world that we really could run critical enterprise workloads on open source-developed software."
