You are reading this article from a website powered by an open-source web server simply because open source web servers power over 80% of websites and applications. The term web server can be used interchangeably to refer to the hardware or software used to serve content to end-users or clients over HTTP.

Web servers have been under development and constant improvement since the early 90s. There are different types of web servers, and they can be built for specific needs, for certain technologies, or as special options for certain corporations.

This article will list some of the reliable and popular open source web server projects available for you to install and get your application or website running.
