Fedora and Red Hat. Both Linux distributions belong to the same organization, both use RPM package manager and both provide desktop and server editions. Both Linux distributions have a greater impact on the operating system world. This is why it is easier to get confused between the two similar distributions. In this article, I will discuss the similarities and difference between Red Hat and Fedora.

This will help you if you want to choose between the two or simply want to understand the concept of having two distributions from the same organization.
