Pine64’s PinePhone has a 5MP rear camera and a 2MP front-facing camera. But when early versions of the phone began shipping, there wasn’t any software that would actually let you snap photos.

So developer Martijn Braam created Megapixels, which wasn’t the first camera app for the PinePhone, but which has certainly become the most fully-functional. It’s also been ported to work with Purism’s Librem 5 smartphone.

Now the camera app is even better. Megapixels 1.0 is now available and, among other things, it adds support for hardware-accelerated graphics, allowing the phone’s viewfinder to provide a nearly real-time preview as you line up your shot.
