- [Defend your dungeon in Legend of Keepers: Career of a Dungeon Manager out now](http://www.tuxmachines.org/story/view/158664)
  
  For the Linux version, one issue encountered is that the intro video is a black screen, which is likely a Unity codec issue - they developer has been made aware of it. It's quite short anyway and doesn't break the game, as you can just skip it.

- [David Rosen of Wolfire Games explains why they're taking on Valve in a lawsuit](http://www.tuxmachines.org/story/view/158664)
  
  Recently we wrote about how Wolfire Games (Lugaru, Overgrowth, Receiver) engaged in a legal battle with Steam owner Valve in regards to alleged anti-competitive behaviour.

  Wolfire's David Rosen has now written up a blog post to explain their feelings on why. It's worth noting that Rosen was one of the original founders of the Humble Indie Bundle, later spun off into its own Humble Bundle company and then sold to IGN. Rosen then, you would think, has a reasonably good grasp on how all this works on the business side. It's somewhat amusing that the blog post starts with "Dear gamers", which probably isn't going to do them any favours in such a legal battle.

- [Railway Empire heads to Japan in the latest expansion pack out now](http://www.tuxmachines.org/story/view/158664)
  
  Gaming Minds Studios and Kalypso Media have released Railway Empire - Japan, the latest DLC pack for the popular rail-network building and management sim.
Railway Empire - Japan transports the series to late-1800s Japan where an industrial revolution is booming and the people are crying out for a nationwide railway. After the successful restoration of the Meiji rule, the Land of the Rising Sun's long-term ambition to develop its own modern, nationwide railway network has become a reality and people from formerly feudal regions are yearning to travel to booming metropolises. Players can lay tracks between mountains and hot springs, using foresight, planning and clever strategy to establish a railway network and facilitate the 'great commute', moving Japan into a new industrial age.

- **Aolta is a unique casual adult-themed RPG where you explore a romantically wretched city | GamingOnLinux**

  Exploring a romantically wretched city as a strange alien creature, Aolta is a thoroughly weird casual experience for those of you who like games aimed at an adult / mature audience.

  "Aolta is a casual RPG where you play as an eponymous alien who lives in a romantically wretched city. Sit back and enjoy the game world... relax at the night club, stroll down the streets and meet interesting creatures and discover their stories. You can find a job that suites your abilities or you can skip work and resort to foraging. Meet someone to love, become the lord of the local music industry, retire to another planet, and/or maybe get married."

- **EXsynchronos is a wild and completely bizarre free transhumanism cyberspace metahorror | GamingOnLinux**

  Free Game Friday! Fancy trying out something completely bizarre? EXsynchronos from developer Ravee is a true cyberspace adventure and it looks fantastic visually.

  The developer describes it as a "transhumanist action packed cyberspace metahorror" and frankly that's about as good a description as you're going to get on this one. It's a complete visual overload on the senses with puzzles, exploration, platforming and shooter elements, all wrapped in a dense atmosphere. You control a Pr0x (Process Resurrective gh0st eXistence), "one of the most advanced virtual technologies that was ever developed" possessed by a human soul.
