Investigating Library Dependencies with ELF Dissector [2]

With the upcoming KF6 transition we have the chance again to further untangle and clean up dependencies between KDE Frameworks. There's a number of tools that help us with analyzing the current state of dependencies, one that we didn't have when KF5 was started is ELF Dissector.

library-level Dependencies

When looking at dependencies we usually start at the module or library level, with something as simple and widely available like ldd. For nicer visualization, script like KDE's
draw_lib_dependencies exist to visualize the result. CMake also provides a similar option to produce a built-time dependency graph.

Latte Dock HowTo Session #1 | The Basics [3]

Hello everyone, this is the first episode from Latte HowTo Sessions. For all these episodes, upcoming Latte v0.10 will be used to demonstrate different options and areas of Latte Dock applicaiton.
