Weekly Roundup May 16th 2021

This week has been a bit slow in Linux news and releases, but we saw the launch of a new major Bodhi Linux release, Canonical finally enabled the upgrade path from Ubuntu 20.10 (Groovy Gorilla) to Ubuntu 21.04 (Hirsute Hippo), and UBports released the Ubuntu Touch OTA-17 software update for Ubuntu Phones.

On top of that, NVIDIA released a new graphics driver for Linux, BSD, and Solaris systems with support for a bunch of new laptop GPUs, Canonical published the first Linux kernel security update for Ubuntu 21.04, and System76 launched their Launch mechanical and highly configurable keyboard.
