- Linux Foundation Launches Open 3D Foundation, Amazon Lumberyard Spun As Open 3D Engine [2]"Yep, so far this Open 3D Engine effort backed by the Linux Foundation so far requires Microsoft Windows and Visual Studio..." as noted here [3]

Amazon previously made Lumberyard available on GitHub while keeping to a proprietary license but this move is indeed seeing Open 3D Engine made available under an Apache 2.0 license and "unencumbered by commercial terms and will provide the support and infrastructure of an open source community through forums, code repositories, and developer events."

- Linux Foundation to Form New Open 3D Foundation [4] [Ed: The so-called 'Linux' Foundation is once again a Microsoft proprietary software monopoly (GitHub) outsourcer, plus the openwashing]

The Linux Foundation, the nonprofit organization enabling mass innovation through open source, today announced an intent to form the Open 3D Foundation to accelerate developer collaboration on 3D game and simulation technology. The Open 3D Foundation will support open source projects that advance capabilities related to 3D graphics, rendering, authoring, and development. As the first project governed by the new foundation, Amazon Web Services, Inc. (AWS) is contributing an updated version of the Amazon Lumberyard game engine as the Open 3D Engine (O3DE), under the permissive Apache 2.0 license. The Open 3D Engine enables developers and content creators to build 3D experiences unencumbered by commercial terms and will provide the support and infrastructure of an open source community through forums, code repositories, and developer events. A developer preview of O3DE is available on GitHub today. For more information and/or to contribute, please visit: https://o3de.org
