- [Migrating from Apache to Nginx on FreeBSD](#) [2]

In this article I will tell you how I've migrated my servers running Apache+PHP to Nginx+PHP-fpm without dying the process.

- [Signify](#) [3]

We look at OpenBSD's Signify. You can use Signify as an alternative to GnuPG or Minisign for signing and verifying files.

Signify uses Ed25519 for cryptographic signing and verification. OpenBSD developers use Signify extensively for signing. Actually, Ted Unangst developed the tool to sign and verify OpenBSD's files. Besides, some other projects rely on Signify, like Wireguard, radare2, or LibreSSL.

The current version of Signify is v30, released on September 24, 2020.

- [Introducing dhcpleased\(8\)](#) [4]

Now enabled by default on OpenBSD -current is dhcpleased(8), a dynamic host configuration protocol daemon written by florian@ (Florian Obser), who spoke with us about his work: [...]
