There are thousands of Linux distributions available that you can use. However, people can't choose one perfect OS that they can use as an alternative to Windows 10 or 8. Now, when it comes to Windows, it's pretty easy to use. The same isn't applicable for Linux. Here, you will have to need basic knowledge to operate and use the operating system. Therefore, people often choose the Linux distribution that is easy to use for a Windows user.

We are going to see the top 5 Linux distributions to replace Windows 10 and 8.

To conclude, these are the top 5 best Linux distributions to replace Windows 10 and 8. There is no specific best OS you can use here. All of them have some similar features. Therefore, you can start using any of them as per your choice. The main thing you need to focus on is the user interface. As it is a Linux version, you will surely get the rest of the things directly from the OS. In simpler words, all the Linux distributions have pretty much the same features. Therefore, you can go with any distributions you want here. Just focus more on the user interface.
