CloudLinux provides extended lifecycle support for CentOS 8 until late 2025[2]

CloudLinux today announced it will provide updates and support for CentOS 8 through December 31, 2025, providing a lifeline for those systems that have just four more months of support from the CentOS community through the end of the year when CentOS reaches end-of-life.

CloudLinux offers CentOS 8 users a support lifeline [3]

When Red Hat, CentOS's Linux parent company, announced it was "shifting focus from CentOS Linux, the rebuild of Red Hat Enterprise Linux (RHEL), to CentOS Stream," which is essentially a beta RHEL rolling release Linux distribution, CentOS users were upset. When CentOS 8 users discovered they'd only get support until the end of 2021, instead of 2029, they were ticked off. Now, CloudLinux has come to CentOS 8 users' rescue.
