Finnix 123 is here almost seven months after Finnix 122 and brings a major change, namely the fact that the sysadmin-oriented distro is now based on the latest Debian GNU/Linux 11 ?Bullseye? operating system series rather than tracking the Debian Testing repositories.

While the distribution is still powered by the Linux 5.10 LTS kernel series, the Finnix 123 release adds several goodies for system administrators, such as the sshd and passwd kernel command-line options (e.g. sshd passwd=foo or sshd passwd=root:foo or passwd=finnix:bar), as well as a basic ?command-not-found? handler that provides users with explicit instructions on how to install certain packages.
