- [The alias Linux Command](#) [2]

Hello friends. Using the Linux terminal is not as complex as many would have us believe. But sometimes we indeed have to get used to it a little bit. On the other hand, many Linux professionals use the terminal on a fairly continuous basis and require some kind of help. Today we are going to talk about the alias command with which you can adapt the terminal to you and your workflow a bit more.

- [How to Force fsck on Reboot](#) [3]

Fsck command is used to check filesystem consistency in Linux and Unix-like operating systems. On the system, fsck runs either automatically or manually. The filesystem shouldn't be mounted while running the fsck. We can force fsck to run on reboot for both root and non-root filesystems.

- [How to install RPG Maker XP on a Chromebook](#) [4]

Today we are looking at how to install RPG Maker XP on a Chromebook. Please follow the video/audio guide as a tutorial where we explain the process step by step and use the commands below.

- [Add Raspberry Pi repository in Ubuntu - blackMORE Ops](#) [5]

I installed Ubuntu 20.04 LTS Server on my Raspberry Pi 4 8 GB and needed to install raspi-config. raspi-config is a simple (if long and involved) shell script to configure Pi hardware and Raspbian settings. It is just a front end to the underlying system commands. Found that I need to add Raspberry Pi repository in Ubuntu.

In Ubuntu 20.04 LTS, /etc/debian_version is bullseye/sid, so it seems to be based on bullseye (Debian 11.0). Since <http://archive.raspberrypi.org/> does not have bullseye, I initially chose buster. Then I changed that to bullseye.

-

[How to Create a Large 1GB or 10GB File in Linux](#) [6]

Before we dive into the procedural steps needed to create large files in a Linux operating system environment, we must answer the WHY before we dwell on the HOW.

WHY create large files on a Linux operating system environment? Afterward, HOW do you create large files on a Linux operating system environment?
