Congatec's Qseven form-factor Conga-QMX8-Plus module runs Linux or Android on the NPU-equipped i.MX8M Plus with up to 6GB LPDDR4, up to 128MB eMMC, a microSD slot, GbE with TSN, and optional -40 to 85°C support.

Congatec announced the first Qseven-form-factor module we have seen build around NXP's i.MX8M Plus, which it has already deployed in its Conga-SMX8-Plus SMARC module. The Conga-QMX8-Plus, which follows earlier i.MX8 family Qseven modules, including the i.MX8X based Conga-QMX8X, runs Linux, Yocto, or Android on the 14nm 1.8GHz, quad-core, Cortex-A53 SoC.
