The popular audio manipulation tool, PulseEffects, finally adds supports for PipeWire sound server by re-naming to EasyEffects.

EasyEffects is a GTK4 app designed for only PipeWire sound server. For PulseAudio, default sound service in current Ubuntu releases, PulseEffects is still available.

The UI looks almost same as before, and it may apply effects including Auto gain, Bass enhancer, Bass loudness, Compressor, Convolver, Crossfeed, Crystalizer, De-esser, Echo C canceller, Equalizer, Exciter, Expander, Filter, Gate, Limiter, Loudness, Maximizer, Multiband compressor, Multiband gate, Noise reduction, Pitch, Reverberation, Stereo tools.
