This week, we have focused on one thing: speed. From UI additions to under-the-hood improvements, Kalendar is now quicker to use and faster to act than ever!

A lot of this week has been spent profiling Kalendar, finding hotspots, and minimising them. As a result, lots of tweaks now help Kalendar perform better, particularly when using the month and schedule views. By limiting the number of view resets each second, using less resource-intensive components, and eliminating cruft, Kalendar is now significantly faster.
