If you're looking for a Linux laptop with a focus on privacy and security, you could roll your own. Several GNU/Linux operating systems are available that are more angled towards privacy and keeping you secure online, rather than general computing. One example is PureOS, the operating system from Purism that you will find pre-installed on the Librem 14.

A top-end ultraportable notebook with specs comparable with a MacBook Pro, the Librem 14 is arguably the most security and privacy-conscious laptop around.

But Purism's laptop costs a pretty penny ? is it worth the price?
