Dubbed Impish Indri, Ubuntu 21.10 introduces several new features and improvements, such as Linux kernel 5.13 for better hardware support, GNOME 40 desktop environment, Wayland session enabled for NVIDIA GPU users, as well as updated apps and internals with the most recent GNU/Linux technologies.

Ubuntu 21.04 "Hirsute Hippo" is supported for only nine months, until January 2022, so you might want to upgrade to a new release, Ubuntu 21.10 in this case, which is supported for another nine months, until July 2022.
