Development version: GIMP 2.99.8 Released

By Roy Schestowitz
Created 21/10/2021 - 12:01am
GIMP 2.99.8 is our new development version, once again coming with a huge set of improvements.

Some early coverage:

- **GIMP 2.99.8 Released with Clone Tool Tweaks, Support for Windows Ink**

  A new development version of GIMP is available to download and it carries some interesting new features.

  While this isn?t a new stable release ? GIMP 2.10.28 is the most recent stable release (and the
version you?ll find in Ubuntu 21.10?s archives) ? the release of GIMP 2.99.8 is yet another brick in the road to the long-fabled GIMP 3.0 release.

And it?s a fairly substantial brick, at that.

- **GIMP 2.99.8 Released As Another Step Toward The Long Overdue GIMP 3.0**[5]

  GIMP 3.0 as the GTK3 port of this open-source Adobe Photoshop alternative has been talked about for nearly a decade now and the work remains ongoing. However, out today is GIMP 2.99.8 as the newest development snapshot.

**GNU GIMP**
