Based on the upstream Coreboot 4.14 release, Star Labs' Coreboot 7 open-source firmware is now available for the StarBook Mk V, Star LabTop Mk III, and Star LabTop Mk IV Linux notebooks, along with an updated Coreboot Configurator utility.

This release comes about three months after Coreboot 6 and brings several new features, including a new option to set the maximum charge level as 60, 80, or 100 percent, as well as a new option to set the fan curve as Aggressive, Normal, or Quiet.
