we're excited to announce the release of Proxmox Virtual Environment 7.1. It's based on Debian 11.1 "Bullseye" but using a newer Linux kernel 5.13, QEMU 6.1, LXC 4.0, Ceph 16.2.6, and OpenZFS 2.1. and countless enhancements and bugfixes.

Proxmox Virtual Environment brings several new functionalities and many improvements for management tasks in the web interface: support for Windows 11 including TPM, enhanced creation wizard for VM/container, ability to set backup retention policies per backup job in the GUI, and a new scheduler daemon supporting more flexible schedules.
