Who wins a battle between Linux Mint vs Ubuntu? Which one is better?

Ubuntu is the most famous Linux distribution in the world. Its development started back in 2004. It is based on Debian distribution, which is why Ubuntu also uses the dpkg packaging system (And .deb package format) along with the apt
packager manager.

Linux Mint, on the other hand, is based on Ubuntu. Its development started in 2008. Hence, Mint by extension is also based on Debian, and uses the same package manager and packaging system.

There are many key and minor differences between Linux Mint and Ubuntu. But often, the question comes to: Which Linux distribution should a new Linux user use on daily basis? Ubuntu or Linux Mint?

To answer that, we will be comparing both distributions by many different criteria in this article.
