- Top 15 articles sysadmins are thankful for | Enable Sysadmin [2]

  Enable Sysadmin has published hundreds of articles; these are the favorites sysadmins turn to month after month.

- What are you thankful for at work? [3]

  This post will be short. Recent FreeIPA versions contain ACME server implementation, which makes TLS certificate issuance a breeze.

- Mark J. Wielaard » Blog Archive » Valgrind 3.18.1 [5]

  3.18.1 fixes a number of bugs and adds support for glibc-2.34, and for new platforms x86/FreeBSD and amd64/FreeBSD. Debuginfo reading is faster, and Rust demangling has been improved. For PPC64, ISA 3.1 support has been completed, and some newer ARM64 and S390 instructions are also supported. See the release notes for details of changes. Note, 3.18.0 had no formal release ? it was pulled at the last minute due to a packaging problem.

Purpose of this team is to take care of day to day business regarding CentOS and Fedora Infrastructure and Fedora release engineering work. It?'s responsible for services running in Fedora and CentOS infrastructure and preparing things for the new Fedora release (mirrors, mass branching, new namespaces etc.). The ARC (which is a subset of the team) investigates possible initiatives that CPE might take on.
