ArduCam has launched a \$25 16MP camera with autofocus for Raspberry Pi boards with 40% higher resolution than the 12MP Raspberry Pi HQ camera, while keeping the compact form factor of the 8MP Raspberry Pi Camera V2.

The camera is equipped with a 16MP Sony IMX519 sensor, works with any Raspberry Pi board with a MIPI CSI interface, and the company claims that with the existing camera tuning algorithms from the Raspberry Pi Foundation, the camera module beats the Raspberry Pi HQ camera's quality in every aspect including sharpness, saturation, exposure, and more. The downside is that it lacks supports for interchangeable lenses.
