While it may sound like a new Ubuntu-based distribution, Gamebuntu is in fact a simple application that automatically installs a bunch of things its creator Rudra Saraswat believes are needed for a complete and fully functional gaming setup on Ubuntu.

The app is targeted at ex-Windows users (a.k.a. Linux newcomers) who want to switch from Windows to Linux/Ubuntu and do some gaming. It works on virtually any supported Ubuntu release or derivative and acts as both an installer and launcher.
