- **The European Commission is making its software open source to benefit society** [2]

  If you?re wondering what sort of code the EC could offer to the world, it gave two examples. First, there?s its eSignature, a set of free standards, tools, and services that can speed up the creation and verification of electronic signatures that are legally valid inside the EU. Another example is LEOS (Legislation Editing Open Software) which is used to draft legal texts.

- **Dirk Eddelbuettel: #34: Less Is More** [3]

  Welcome to the 34th post in the rambunctiously refreshing R recitations, or R4. Today?s post is about architecture.

  Mies defined modernism. When still in Europe, I had been to the Neue Nationalgalerie in Berlin which provides a gorgeous space for the arts. Twenty-five years ago, I worked next to his Toronto-Dominion Center in Toronto. Here in Chicago we have numerous buildings: the Federal Center (the Dirksen, the Kluczynski and the US Post Office rounding out the square in the Loop), multiple buildings on the Illinois Tech (aka IIT) Campus where he taught in the architecture department he created and lead, the (formerly called) IBM Plaza building at the river and more.

  Structure and minimalism, often based on the same core elements of black steel beams and glass, are a landmark of these buildings. One immediately senses that there is nothing left to take away.

- **Launching the 2021 State of Rust Survey | Rust Blog** [4]

It's that time again! Time for us to take a look at who the Rust community is composed of, how the Rust project is doing, and how we can improve the Rust programming experience. The Rust Community Team is pleased to announce our 2021 State of Rust Survey! Whether or not you use Rust today, we want to know your opinions. Your responses will help the project understand its strengths and weaknesses, and establish development priorities for the future.

[Apple debuts new Open Source website, will release projects on GitHub](#) [5] **[Ed: Openwashing in Microsoft's proprietary software monopoly]**

Featured Projects details some of the open source projects that Apple leads. Additionally, it also features open source projects led by third-party organizations but contributed to by Apple engineers.

The Releases section will see Apple publishing the code used in various macOS, iOS, and Developer tools. Apple says, alongside the updated website, it will begin making its open source projects available as git repositories on Github.
