Still based on the Ubuntu 20.04.3 LTS release of the long-term supported Ubuntu 20.04 LTS (Focal Fossa) operating system series from Canonical, the Linux Lite 5.8 distribution release promises updated components, bug fixes, and many other tweaks and changes.

Don’t get too excited because Linux Lite 5.8 is an incremental update to the previous releases in the Linux Lite 5 series. As such, it would appear that the major changes of this upcoming update are an updated Papirus icon theme and nine new wallpapers to make your Linux Lite desktop experience more enjoyable.
